

Business Integration

Lecture 11: Course work ,
Criteria's (1- 5)

Criteria 1:

Introduction (100 words) + Infographics

- 1. the problem area*
- 2. what your prototype does*
- 3. why transforming it into a business is meaningful*

Structure of Introduction

- 1. Explain the domain/problem.*

Optional - Include if you can — — - 50 words.

Existing Problems / Gap

- 1.1 What current systems fail to solve.*

Business Concept Development:

Proposed Business Concept (100 words) + infographics

your hypothetical company

what it offers- (*it is about the product or service*)

core value proposition (VPC) (**Template**)

delivery method (*for example if you have a product, how do you think to deliver it to the customers ?*)

Problem the business concept is trying to solve. (100 words + infographic)

A strong business report needs this.

Elaborate on the solution as a prototype, that is delivered through the features of the prototype.

Aims and Objectives :

Business Concept Potential - 50 words

Explain why this could become a scalable business.

Aim (Single Broad Goal)

Aim is usually one broad statement.

Example:

“To develop a scalable business model based on the proposed prototype solution for improving operational efficiency in SMEs.”

or

“To transform the prototype into a sustainable and market-oriented business solution.”

Keep Aim broad and strategic.

Objectives (Specific Actionable Steps) - (5-8 steps)

Objectives are measurable and operational.

Example structure:

To analyze the target market and customer needs.

To develop a roadmap for commercialization.

These objectives later map directly into chapters.

To evaluate the feasibility of the prototype as a business solution.

Criteria 3 :

Implementation of Design Thinking

What to write ? 100 words + Infographics

You need to define Design Thinking first.

What kind of problems Design Thinking can solve?

And the use of Design thinking that your business concept will implement to solve the problem.

Design Thinking Methods 50 words + Infographics

Your choice of design thinking methods. (3 , 5, 7)

justify - why did you choose (3, 5, 7) design thinking methods to solve the problem.

Provide Each Design thinking Steps with Infographics - 200-500 words + infographics in each section .
